

F-15 Dreadnought. Super sound. That's the F-15 dreadnought. The lower bout is newly configured for a booming bass. And tapered radial bracing inside the spruce top makes for brighter treble and overall better sound. Compare the F-15 to other dreadnoughts, and you'll see and hear the difference.

F-21 Dreadnought. If you're good, and want to look good and sound better, pick up an F-21. Saphere back and sides. Pearl inlay. The dreadnought with a sound competitive to guitars costing lots more. An honest pickin' and strummin' instrument that's tough to put down.
